IF YOU READ NOTHING ELSE

The 30-second version

1	Open the Lead → click	Smart Convert	. If a green card appears and the details look right,	Convert now	— you're done in one click.
2	Location decides the office		, not deal counts — the office's address becomes the contact's address.		
3	If the email matches someone we know, the wizard	links to them	. Never create a second copy of a person.		
4	Already subscribes to this product, or a related one? The wizard makes it a	Renewal, Upsell or Cross-sell	for you. A client of other, unrelated products is still	New Business	for yours.
5	Open deal already covers this product?	Add to it	— don't split the deal. (The opportunity toggle is off by default; switch it on only when this enquiry should open a new deal.)		
6	Check Account context		for the CSM who covers this product before you reach out.		

- 7 Finish with the **follow-up task** — a converted lead with no next action goes cold.
- 8 "Convert blocked" is the system explaining itself, not crashing. Read the message; it names the fix.

— THE BIG PICTURE

How matching works

The wizard reads the lead's **email domain** and checks it against every firm and office we hold. One of three things happens — and each path protects you from creating a duplicate:

Personal addresses (gmail, yahoo...) are never used as a company key — those leads go straight to search and guided create. And when the email domain is one we've never seen but the lead's **website** matches a firm we know (alias domains like @victoria.com vs victoriasscret.com), the match comes through at "worth a check" confidence for you to confirm.

— SCREEN BY SCREEN

The five screens

The stepper across the top always shows where you are. Most converts never see all five screens — a confident match jumps from screen 2 straight to Done.

1 Inbound — who arrived?

A read-only summary of the lead. The **quality strip** under the stepper follows you through every screen:

Smart Convert
REVOPS · MATCH & SELECT

CENTELIC **LIVE**

1 Inbound 2 Match 3 Choose office 4 Confirm 5 Done

Grade B+ Score 87 Radar fit 82 Email: Valid

— ONE ENGINE · TWO DOORS

An enquiry lands

Name, title, email, company and location — exactly what the person submitted.

- 1 **Quality strip** — Pardot Grade & Score plus email verification, on every screen — and an **ALM Radar fit** chip where the lead carries one. A dashed "No Pardot score on this lead" chip means the lead was never scored (common for hand-created leads) — not an error.
- 2 **Environment badge** — LIVE means production. If it names a sandbox, you're practising, not converting for real.

2 Match — the one-click moment

When exactly one firm owns the domain and one office is the obvious home, you get the green express card:

Smart Convert
REVOPS · MATCH & SELECT

CENTELIC **LIVE**

✓ Inbound 2 Match 3 Choose office 4 Confirm 5 Done

Grade B+ Score 87 Email: Valid

1

⚡ **High-confidence match — convert in one click**

Dentons → **Dentons UK and Middle East LLP** · cross-sell

☐ Also create the cross-sell opportunity (off — flip on if this should open a deal)

[Convert now](#)[Review details →](#)

— RESOLVE · INDEXED, INSTANT

Who is this, really?

The match trace shows its working in plain language, with a confidence meter.

- 1 **Convert now** finishes everything — account, contact, placement — in one click. **Review details** walks the full wizard instead. When in doubt, review; it costs 20 seconds. The **create-opportunity toggle sits right on the green card** (off by default) — flip it before clicking if this enquiry should open a deal.

What you do: details right → **Convert now** (flip the opportunity toggle on the card first if a deal should be created). Anything looks off → **Review details**.

3 Choose office — location wins

Candidate offices are ranked **location first, deal volume second**, and the recommendation is pre-selected:

**Smart Convert**

REVOPS · MATCH & SELECT

**Dentons UK and Middle East LLP**

London, GB · matches lead location
41 contacts · 6 opps this FY

23
£1.2M WON**Dentons US LLP**

New York, US
28 contacts · 9 opps this FY

31
£1.8M WON

3

Wrong firm? Search & pick a different one — by firm or office name.

- 1 **Recommended office** — pre-selected because the lead's location matches. The US office has *more* won business, and still doesn't win: the address on the office becomes the contact's address.
- 2 **The numbers** — won deals, value, contacts — context, not the deciding factor.
- 3 **Manual search** — the escape hatch when the auto-match is wrong or empty. Searching an office name (e.g. "Dentons UK") finds it and pre-selects it under its parent firm.

What you do: usually nothing — the right office is already selected. Click Next.

4 **Confirm — the full picture before you commit**

One screen with everything that matters: who's on the account, what's already in play, and who this enquiry should attach to.

The screenshot shows the 'Smart Convert' interface with the sub-header 'REVOPS · MATCH & SELECT'. In the top right corner, the 'CENTELLIC' logo is next to a 'LIVE' status button. A progress bar at the top indicates five steps: 'Inbound' (checked), 'Match' (checked), 'Choose office' (checked), '4 Confirm' (active), and '5 Done'. Below the progress bar, three status boxes are shown: 'Grade B+', 'Score 87', and 'Email: Valid'. The main content area features a dropdown menu labeled '1 Account context' with the text 'Sarah Poole · E&I CSM · 20 contacts · 2 committee gaps'. Below this, two informational boxes are present: an orange box labeled '2' stating 'This firm already has an open GCR opportunity — consider adding to it instead of creating a second. The create-opportunity toggle is off.' and a teal box labeled '4' stating 'This person already exists at this firm — we'll link the enquiry to them instead of creating a second record.' At the bottom, there is a 'Create an opportunity' button and a toggle switch labeled 'OFF — switch on if this should open a deal'.

- 1 **Account context** (click to expand) — the account team across the firm with the CSM who covers this product highlighted, plus the firm's known contacts and which buying roles we're missing.
- 2 **Open deals** — every open opportunity with stage, type, value, close date and owner. Same product already in play? Join that deal.

- 3 **Existing person** — matched by email; the enquiry attaches to them. We never move people between offices (that would overwrite their address).
- 4 **Opportunity toggle** — **off by default**. Switch it on only when this enquiry should open a new deal; pick the currency if it's not yours.

What you do: scan the context, decide on the opportunity toggle, click **Convert**.

5 Done — and the next action

The screenshot shows the 'Smart Convert' interface. At the top, it says 'Smart Convert' with a sub-header 'REVOPS · MATCH & SELECT'. On the right, it says 'CENTELIC' and 'LIVE'. Below this is a progress bar with five steps: 'Inbound', 'Match', 'Choose office', 'Confirm', and 'Done'. The 'Done' step is highlighted with a green circle and a checkmark. In the center, there is a large green circle with a white checkmark and the text '— CONVERTED' below it. Below this, the text 'Converted. No duplicate.' is displayed. Underneath are three buttons: 'View Account', 'View Contact', and 'View Opportunity'. On the left side, there is a green circle with the number '1'. To the right of this is a box titled 'Next action' with a red icon. The text inside the box says: 'Qualify the GCR enquiry and book a discovery call. Sarah Poole (E&I CSM) covers this firm.' Below this, it says 'Type: Call Due: In 2 days Assign to: Me'. At the bottom of the box is a button that says '+ Create follow-up task'.

- 1 **The follow-up task** — type, due date, assignee (you, or hand it straight to the covering CSM) and your comments. Ten seconds here is the difference between a pipeline and a graveyard.

— THE CLEVER PART

Customer or prospect? The wizard already knows

Before you confirm, the system checks whether the firm **actively subscribes to the product the enquiry is about** — the one the lead names or, when it names none, **your team's product line** (the banner tells you when it's done that). Deals the firm has won on other, unrelated products don't count. What it finds changes what gets created:

The opportunity Type, name and close date are set automatically to match.

A customer of this product or its family is an opportunity, not a rejection — the wizard does the classification so you don't have to.

Product families: Law.com — including Radar and Compass, plus VerdictSearch — and the **Specialist Platforms** titles (GAR, GCR, GIR, WTR, IAM and the rest of that group). Every Lexology product stands alone: a Lexology PRO subscription doesn't make them a Lexology Intelligence customer.

— WHEN IT'S NOT THE HAPPY PATH

Special situations

Several firms share the domain

You'll be asked to pick. **Take the extra ten seconds** — your choice decides where the contact and any deal live, and a wrong pick means Data Team cleanup. Each card shows the firm's domain, its **office locations** (so similarly named firms separate at a glance) and its footprint (offices · contacts · won deals) — compare against the lead's email; if unsure, check the firm's website first.

No match at all — create instantly, sell faster

This used to be the slow lane: account creation was locked down, so a genuinely new company meant emailing the Data Team and waiting before you could even convert. **Not any more.** The wizard runs its duplicate checks, then builds the new firm and its first office on the spot — you pick one reason from a picklist and you're converting within seconds, not days. The office takes the company's name exactly as it appears on the lead, with the full address including state, so quotes and contracts show the right legal name. The Data Team is notified automatically to review and enrich the new account behind you, so speed and data quality both win.

Not a fit? Disqualify — but keep the person

The Disqualify button converts **without an opportunity** and records your reason. The person still lands under the right firm — because today's "not interested" is next year's renewal contact. Nothing is thrown away.

Convert blocked

This is a **feature**: one of the org's data-quality rules stopped the convert, and the message names it. Fix the named thing on the lead (in the example above: add Mr/Ms as the Salutation), then hit **Restart**.

Troubleshooting

YOU SEE...	IT MEANS...	DO THIS
"You do not have access to the Apex class..."	You don't have the Smart Convert permission set.	Ask RevOps for the LeadMatchSelect permission set.
"Please add the Salutation to this Contact"	An org rule requires Mr/Ms/Dr on every contact.	Add a Salutation on the lead, then Restart.
"No Pardot score on this lead" chip	The lead was never scored — usual for manually created leads.	Nothing — it's information, not an error.
No green express card	The match needs your judgement (several firms, or none).	Walk the wizard — it asks one question at a time.
Old screens / missing features	Your browser cached an old version.	Log out and back in — a hard-refresh (Ctrl+F5) doesn't always clear it.
"Email flagged Invalid" warning	Verification says the address is dead.	Consider Disqualify (reason: invalid email) instead of converting.
"Matched via the lead's website"	The email domain is new to us, but the lead's website matches a firm we know (an alias domain).	Confirm the firm looks right, then convert — and tell the Data Team so the alias domain can be added.
"...based on your team's line" in the banner	The lead doesn't name a product, so the wizard checked the firm against your team's product line.	Nothing — but if the enquiry is really for another team's product, pass the lead to them instead of converting.
Contact went to a different office than expected	The person already exists at that office; we never move people.	Nothing — it's flagged for review automatically.

Do I still use the standard Convert button?

No — it's gone: the native Convert button has been removed from the Lead page. Smart Convert is how leads are converted: same outcome, minus the duplicates and the guesswork.

What if the wizard picks the wrong firm?

Use "Wrong firm? Search & pick a different one" on the office screen — search by firm or office name. Your correction is recorded and helps us improve the matching.

Why is the opportunity toggle off by default?

Not every enquiry should open a deal, and half of them belong on a deal that already exists. Switch it on when this enquiry genuinely starts something new.

The firm is already our client — why does it say New Business?

Because they don't subscribe to *this* product or a related one. Being a Lexology or Events client doesn't make a Law.com enquiry a cross-sell — for Law.com it's new business, and that's how it's reported.
