

Smart Convert — Rep Training Guide & UAT Script

LIVE IN PRODUCTION

since 14 August 2026 · UAT completed in FULLUAT · Owner:

Kamyar Jannati (Head Data and CRM)

Who this document is for: the RevOps team, to train sales reps and SDRs on the Smart Convert lead-conversion cockpit — with the UAT script retained at the back as the acceptance record and regression pack.

1. What is Smart Convert, and why it exists

Converting a lead used to be where duplicates were born: the same firm created fifteen times (Dentons ×15, KPMG ×11 in production), contacts under the wrong office with the wrong address, and existing customers treated as brand-new prospects.

Smart Convert replaces the native Convert button (now removed from the Lead page) with a guided, 5-step cockpit that:

- **Matches the lead to the right firm automatically** using the email domain — no typing, no guessing.
- **Places the contact under the right office** (location first — because the office address is stamped onto the contact).
- **Never creates a duplicate person** — it finds existing contacts by email and links the enquiry to them.
- **Knows whether the firm already subscribes to the product** the enquiry is about (or, when the lead names none, the converting rep's own product line), and frames the convert as New Business, Cross-sell, Upsell or Renewal accordingly.
- **Creates genuinely new firms on the spot** — duplicate-checked, in seconds, with the Data Team notified to enrich behind you. No more waiting to sell.
- **Shows the room before you act:** the covering account-team member, existing open opportunities, the firm's known contacts.
- **Closes the loop** with a one-click follow-up task so no converted lead dies untouched.

2. Before you start

PREREQUISITE	DETAIL
Permission set	<code>LeadMatchSelect</code> must be assigned. Without it the wizard can't resolve firms (and the Apex classes aren't accessible).
Where to find it	Open any Lead record → Smart Convert quick action. It opens the wizard in a modal.
Fresh session	Log out and back in (or fully close the browser) after any new deployment. Lightning caches components aggressively, and a hard-refresh (Ctrl+F5) doesn't always clear it — one rep kept seeing a week-old version until he logged out.
Environment badge	The header names the org: LIVE in production, or the sandbox name (e.g. FULLUAT) when practising.

3. The wizard — step by step

Step 1 · Inbound

Who arrived: name, title, email, company, location — plus the **quality strip** (Pardot Grade & Score, email validity, and an **ALM Radar fit** chip where the lead carries one) which follows you through every screen. Chips appear only when the lead carries that data; a dashed "No Pardot score on this lead" chip means the lead was never scored (usual for manually created leads) — information, not an error. A red "Email: Invalid" chip means verification flagged the address — consider disqualifying instead of converting a dead email.

Step 2 · Match

The engine resolves the email domain to a firm and shows its working in plain language, with a confidence meter:

- **Strong match (one firm owns this domain)** — a green "High-confidence match — convert in one click" card appears. The **create-opportunity toggle (and currency) sits right on the card**, off by default — flip it before clicking if this enquiry should open a deal. Details right? **Convert now** finishes the whole job in one click. "Review details" walks the full wizard.
- **Several firms share the domain** — you pick the right one at the next step; never automatic. Each card shows the firm's domain, its **office locations** (so similar names separate at a glance) and its footprint.
- **No match** — guided create (new firm + office) with duplicate checks first. The new office takes the **company name exactly as on the lead** (no location suffix — the account name flows onto quotes and contracts as the legal entity name) and the lead's **full address, including state**.

Free personal domains (gmail, yahoo, etc.) are never used as a firm key — those leads fall back to company-name search and guided create. When the email domain is unknown to us but the lead's **website** matches a firm we know (alias domains), the match comes through at review confidence — the rep confirms, never one-click.

Step 3 · Choose office

Candidate offices are ranked **location first, deal volume second**. The recommended office is pre-selected; each card shows city/country, contacts, won opportunities and value.

Why location beats deal volume: the office's address is stamped onto the new contact. An office with more opportunities never outranks the office the person actually works in — opportunity count only breaks ties. When the two disagree, the wizard flags it for review instead of auto-converting.

Wrong firm? "Search & pick a different one" finds any existing firm **or office** by name (an office hit resolves to its parent firm and pre-selects that office). "Back to the recommendation" undoes the override.

Step 4 · Confirm

- **Account context bar** (click to expand): the account team across the firm with the member **whose role covers this product** highlighted (Law.com CSM / PI CSM / E&I CSM), plus the buying committee — known contacts tagged by role (Knowledge/PSL, Library/Research, L&D, Practice leadership) with gap chips for the personas we're missing.
- **Open opportunities panel:** every open opp with stage, type, amount, close date, owner — and a renewal chip with the budget renewal date where relevant. If an open opp already covers this product, join that deal rather than

splitting it.

- **Who should this enquiry attach to?** An email match pre-selects the existing contact — no second record. A contact at a different office shows a "possible move" note: we attach where they already are and **never move people between offices**.
- **Create Opportunity toggle — OFF by default.** Switch it on only when this enquiry should open a new deal. The **currency** selector defaults to your user currency — change it if the deal is in another currency.

Step 5 · Done

- Links to the new Account, Contact and Opportunity, plus a next step tailored to the situation — e.g. "Qualify the GCR enquiry and book a discovery call. Sarah Poole (E&I CSM) covers this firm."
- **One-click follow-up task:** Type (Call / Email / Meeting / Product Demo / Product Trial / Connect on LinkedIn / Other), due date, assignee (you, or hand it to the covering CSM), and your comments. The task lands on the new contact and opportunity.

4. Sales motions — what the wizard decides and why

Rules changed 24 September 2026 at Commercial's request (Khris Fenton, VP New Business, Law.com). Before that date, any Closed Won deal at the firm — on any product — made an enquiry a Cross-sell. It no longer does: only active subscriptions relevant to the enquiry count.

Which product is the enquiry about? The product the lead names, if we recognise it. If the lead names nothing (or free text we don't recognise), the **converting rep's own product line** — the opportunity they create is for what their team sells — and the banner tells the rep so. Leads arriving via Pardot forms have no rep yet, so they use the lead's product only.

MOTION	WHEN	WHAT THE WIZARD DOES
Renewal	Active subscription to this product , ending within 90 days	Opportunity Type = Renewal; close date = term end (lands on the renewal forecast)
Upsell	Active subscription to this product , ending more than 90 days out	Opportunity Type = Upsell
Cross-sell	No subscription to this product, but an active subscription to a related product in the same family	Opportunity Type = Repeat Business; banner names the family
New Business	Anything else — including firms that are customers of unrelated products (a Lexology or Events client enquiring about Law.com is New Business for Law.com)	Opportunity Type = New Business; close date = platform default (end of current quarter). Where the firm does business with us elsewhere, the banner says so — as context, not as a cross-sell

PRODUCT FAMILY	MEMBERS (WHAT COUNTS AS "RELATED")
Law.com	Law.com — including Radar and Compass, which are Law.com-branded products — plus VerdictSearch. Lead values like "LAW.COM RADAR", "Legal Radar", "Legal Compass", "VerdictSearch.com" and "LAW.COM INTERNATIONAL" are recognised; marketing-campaign text ("Law.com Promo - ...") is not, because several of those are advertising enquiries.
Specialist Platforms	GAR, GBRR, GCR, GDR, GIR, GRR, IAM, IPBC, LACCA, WTR

Everything else	Stands alone — e.g. each Lexology product (a Lexology PRO subscription doesn't make the firm a Lexology Intelligence customer)
-----------------	--

REP'S TEAM (USER → TEAM)	PRODUCT LINE USED WHEN THE LEAD NAMES NONE
ALM Legal - Info Services; ALM Legal - Info Services - Customer Care	Law.com family
Lexology Pro / Lexology Intelligence	Lexology PRO / Lexology Intelligence
Expert Insight - Lexology Panoramic / Expert Insight - Lexology In-Depth / Performance Data - Lexology Index	Lexology Panoramic / Lexology In-Depth / Lexology Index
Specialist Platforms, GxRs, Events, Marketing Services, TBRC, Data and all other teams	None — the lead's product only (multi-title teams await a Commercial decision)

Families and team mappings live in the `Brand_Mapping__mdt` custom metadata — changing them is configuration, not code.

Key training message: an existing customer *of this product or its family* is an opportunity, not a rejection — it's an upsell, renewal or cross-sell. A customer of unrelated products is new business for yours. The only genuine duplicate case is an open opp already covering this brand — then join it, or disqualify as duplicate.

5. Disqualifying — but keeping the record

The **Disqualify** button never throws the person away. It runs the same convert with **no opportunity**, links the person to the right account and contact, and records the reason (required). One complete view of every customer — a disqualified lead today is a renewal contact tomorrow.

6. Golden rules (the 30-second version)

1. Green express card + correct details = **one click and you're done**.
2. **Location decides the office**, not deal counts — the address goes onto the contact.
3. **Never create a second person** — if the email matches, link.
4. Customer of this product or its family ≠ disqualify — it's an **upsell / renewal / cross-sell**. Customer of something unrelated = **new business** for you.
5. Open opp for the same brand? **Add to it**, don't split the deal. The opportunity toggle is **off by default** — opt in when a new deal is genuinely starting.
6. Check the **covering CSM** in Account context before reaching out.
7. Always leave with a **follow-up task** — converted-but-untouched is how leads die.
8. "Convert blocked" means a data-quality check stopped it — read the message; nothing fails silently.

7. What gets recorded (for RevOps)

Every convert stamps telemetry on the Lead: `Conversion_Source__c` = "Smart Convert",
`Match_Confidence__c` (ONECLICK / REVIEW / GUIDED_CREATE),
`Opportunity_Motion__c`, `New_Account_Created__c`, `Recommended_Office__c`,
`Override_Recommendation__c`, `Manual_Search_Used__c`, `Create_Reason__c`,

Disqualify_Reason__c . This powers duplicate-creation, motion-mix and matcher-feedback reporting, and shows where matching needs enrichment.

Reporting caveat: Opportunity_Motion__c on leads converted **before 24 September 2026** over-states Cross-sell (1,152 of the first 2,231 conversions were stamped Cross-sell under the old rule). Salesforce locks converted leads, so that history can't be corrected. For motion reporting use **Opportunity Type** — the ten open opportunities still carrying the old "Repeat Business" were corrected on 24 September.

8. UAT testing script (acceptance record & regression pack)

How to run: use real leads matching each scenario's profile; each convert consumes its lead, so use a fresh lead per test. Record Pass/Fail + observations; report issues with the test ID, the lead link and a screenshot.

A. Core conversion paths

ID	SCENARIO	LEAD PROFILE	STEPS	EXPECTED RESULT
T1	Express one-click convert	Corporate email matching exactly one firm, one obvious office	Open Smart Convert → green card → Convert now	Converts in one click; Done screen links Account/Contact/Opportunity; contact under the recommended office
T2	Full wizard walk	Same as T1	Review details → all steps → Convert	Every step renders; office numbers show real figures; convert succeeds
T3	Existing contact — link	Email matches an existing Contact	Confirm → "This person already exists" → Convert	No new contact — enquiry attaches to the existing contact at their current office
T4	Cross-office contact	Email matches a contact at office B; lead location suggests office A	Confirm → read possible-move note → Convert	Contact NOT moved; lands at their office; flagged for review
T5	Ambiguous firm	Domain shared by 2+ firms	"Which company?" → pick → Convert	Picked firm's offices shown; convert lands under it
T6	Manual firm/office search	Auto-match wrong or empty	Search by firm AND office name → pick → also press Back after searching	Both hit types return (office hits show "Office of {firm}" and pre-select that office); Back leaves Next enabled
T7	No match — guided create	Unknown corporate domain, full US address incl. state	Walk through → Create Reason (required) → Convert	New Firm (no address) + Office + Contact; Next disabled until reason; account flagged for review. Office named exactly like the firm (no " — City" suffix); Office and Contact carry the state
T8	Firm exists, no office	Lead matches an office-less firm	Walk through → Convert	New office under the EXISTING firm — no duplicate firm

B. Sales motion & opportunity behaviour

ID	SCENARIO	LEAD PROFILE	STEPS	EXPECTED RESULT
T9	Renewal motion	Brand actively subscribed, term ends within ~90 days	Check banners → convert with opportunity ON	Renewal banner with term end; Opportunity Type = Renewal; Close Date = term end
T10	Upsell motion	Active subscription, term ends > 90 days	As T9	Upsell banner; Opportunity Type = Upsell

T11	Cross-sell motion	Active subscription to a sibling in the same family , not this product (e.g. GAR subscriber + GCR lead; VerdictSearch subscriber + Law.com lead)	As T9	Cross-sell banner (family named); Opportunity Type = Repeat Business
T12	Open opp on same brand	Brand with an OPEN opp on the firm	Confirm → check open-ops panel and toggle	Open opps listed with stage/type/amount/close/owner (+ renewal chip); toggle is off by default for every convert ; warning recommends adding to the existing deal
T13	Currency	Any convert with opportunity ON	Change the currency → Convert	Opportunity in the selected currency; default was your user's currency
T23	Customer of unrelated products	Law.com lead at a firm with Closed Won deals on other products (e.g. Lexology, Events) and no Law.com-family subscription	As T9	Banner: "New business for Law.com — this firm already works with us on other products"; Opportunity Type = New Business (never Repeat Business)
T24	Rep's product line fallback	Lead with no product , converted by a rep in team "ALM Legal - Info Services", at a firm with an active Law.com subscription	As T9	Upsell banner noting "based on your team's line — Law.com"; Opportunity Type = Upsell; opportunity name includes "Law.com". A rep in an unmapped team (e.g. Data) gets New Business
T25	Law.com family spelling	Lead product "LAW.COM RADAR" or "Legal Compass", firm with an active Law.com subscription	As T9	Recognised as Law.com: Upsell (or Renewal if ending within 90 days)

C. Context, quality & follow-up

ID	SCENARIO	LEAD PROFILE	STEPS	EXPECTED RESULT
T14	Account context / covering CSM	Firm with Account Team members	Confirm → expand Account context	Team across the firm's offices; covering member highlighted and named in the summary; committee shows contacts + persona gaps
T15	Follow-up task	After any successful convert	Done → set Type/Due/Assign + comment → Create task → open it	Task with chosen Type, due date, assignee; comments contain only your text; linked to contact and opportunity
T16	Contact role stamped	After any convert with opportunity	New Opportunity → Contact Roles	Converted contact's role = Decision Maker
T17	Invalid email warning	Lead with Email Verification Status = Invalid	Open the wizard → check chips + Match step	Red "Email: Invalid" chip + warning suggesting disqualify
T18	Disqualify — kept on record	Any lead with a convert target	Disqualify → reason → confirm	Reason required; converts with NO opportunity; "kept on record" screen; reason stamped

T19	Free-mail lead	gmail/yahoo address + company name	Open the wizard	No false domain match — routes to search / guided create
T20	Header badge	Any lead	Look at the header	Badge names the actual org; processing overlay with progress messages during convert
T21	Express opportunity toggle	Any high-confidence lead	On the green card, flip the create-opportunity toggle ON → Convert now	Opportunity created from the one-click path; toggle defaults off when left alone
T22	Website-fallback match	Lead whose email domain matches nothing, with a website matching a known firm	Open the wizard → check the confidence label	Firm resolves via the website; confidence reads "matched via the lead's website" at review level; NO express card (never one-click)

Appendix — environment notes

- Each convert consumes its lead — use a fresh lead per test.
- **Prefer real inbound leads** over hand-made test leads — hand-made leads carry no Pardot score, no email-verification status and often no address, so several panels legitimately show less.
- Sandbox email deliverability is usually restricted — Data Team notification emails may not deliver from sandboxes.
- Office cards compute their numbers live when stored rollups are unpopulated, so figures always reflect actual opportunity data.
- For T24, the tester's own **User** → **Team** decides the fallback — check yours before running it.
